1 TEST STANDARDS

The tests were performed according to following standards:

FCC Part 15 Subpart A
October 2008

Code of Regulations Part 15 (Radio Frequency Devices), Subpart A
(General) of the Federal Communications Commission (FCC)

FCC Part 15 Subpart C
October 2008

Code of Regulations Part 15 (Radio Frequency Devices), Subpart C
(Intentional Radiators) of the Federal Communications Commission
(FCC)

Applied Paragraphs: §15.207, §15.209, §15.249

ANSI C63.4-2003

American National Standard for Methods of Measurement of Radio-
Noise Emissions from Low-Voltage Electrical and Electronic
Equipment in the Range of 9kHz – 40 GHz

File No. **T-0239-3062-03 JP**

2 SUMMARY

GENERAL REMARKS:

The EUT has a TX mode and a RX mode but RX is without TX beacons not possible therefore the measurements were performed in TX mode only. The frequency range was scanned from 9 kHz to 40GHz.

The EUT is equipped with RS232 interface additional it is possible to ad a RJ45 interface. It is also possible to add potential free relais. To determine the worst case combination the disturbances were measured with a combination of RS232, RJ45 interface and relais, a combination of RS232 and relais and a combination of RS232 and RJ45 interface.

FINAL ASSESSMENT:

The equipment under test **fulfills** the EMC requirements cited in clause 1 test standards.

Date of receipt of test sample : acc. to storage records

Testing commenced on : 2009-03-25

Testing concluded on : 2009-03-27

3.2 Power supply system utilised

Power supply voltage: 10 - 36 V DC

3.3 Short description of the Equipment under Test (EuT)

The EuT is a system for contactless, real time determination of distances and positions.

Number of tested samples: 3
Serial number: none (preproduction)

Dimensions:
Main unit L: 28 cm W: 16 cm H: 9 cm
Antenna L: 30,5 cm W: 30,5 cm H: 18 cm (inclusive holder)
Antenna cable L: 400 cm

Radio equipment characteristics

Frequency band(s): 5725MHz – 5875MHz
CH7 (maintenance): 5864MHz
CH8 – CH13: 5863MHz – 5858MHz
Operating frequency: Distance measurement band low edge: 5727 MHz
Distance measurement band high edge: maximal 5860MHz
(center of allocated FSK Channel – 3MHz)
Channel spacing: 1 MHz (FSK-Channel / maintenance Channel))
Number of RF-channels: 1 fixed maintenance Channel (CH7)
5 adjustable FSK Channels (CH8 – CH13)
1 band for distance measurement
Comments: None

File No. **T-0239-3062-03 JP**

EuT operation mode:

The equipment under test was operated during the measurement under the following conditions:

- Testsoftware was active, FSK CH7 active

- Testsoftware was active, FSK CH13 active

EuT configuration:

The following interface cables and peripheral devices were connected during the measurements:

Interface cables:

Interface cable	Length [m]	Type	Line		Line termination
			shielded	unshielded	
Power Supply / RS232	4,7	8-wires	<input checked="" type="checkbox"/>	<input type="checkbox"/>	Power supply unit
Relais*	4,6	14-wires	<input checked="" type="checkbox"/>	<input type="checkbox"/>	none
LAN* **	4,9	8-wires	<input checked="" type="checkbox"/>	<input type="checkbox"/>	USB-LAN adapter
Antenna 1	4,0	1-wire	<input checked="" type="checkbox"/>	<input type="checkbox"/>	Antenna 1
Antenna 2	4,0	1-wire	<input checked="" type="checkbox"/>	<input type="checkbox"/>	Antenna 2

* only connected if connector available in the tested version**: equipped with ferrite core "RKCF-06-A5" on EUT side

Peripheral devices:

Kind of equipment		Model and/or Manufacturer
Power Supply		DPM20LP, Deutronic
Line filter		B84113-C-B30, Epcos
USB-LAN adapter*		SD-ADU2LAN-3M
Laptop		Lifebook E Series, Fujitsu-Siemens

*not used for Version without RJ45 connector

File No. **T-0239-3062-03 JP**

4 TEST ENVIRONMENT

4.1 Address of the test laboratory

**emitel AG
Ohmstrasse 1
94342 Strasskirchen
Deutschland**

Laboratory registration numbers:

DAR Registration number:	DAT-P-121/02-00
DAR Registration number:	KBA-P 00057-01
SNCH Registration number:	SNCH 001/2005
FCC Registration number:	765810
IC Registration number:	IC 5066A-1
VCCI Registration number:	R2138

4.2 Environmental conditions

During the measurement the environmental conditions were within the listed ranges:

Temperature: 15-35 ° C

Humidity: 30-60 %

Atmospheric pressure: 86-106 kPa

4.3 Statement of the measurement uncertainty

The data and results referenced in this document are true and accurate. The reader is cautioned that there may be errors within the calibration limits of the equipment and facilities. The measurement uncertainty was calculated for all measurements listed in this test report acc. to CISPR 16-4-2 /11.2003 „Uncertainties, statistics and limit modelling – Uncertainty in EMC measurements“ and is documented in the quality system acc. to DIN EN ISO/IEC 17025. Furthermore, component and process variability of devices similar to that tested may result in additional deviation. The manufacturer does have the sole responsibility for the continued compliance of the device.

File No. **T-0239-3062-03 JP**

4.4 Measurement Protocol for FCC, VCCI and AUSTEL

4.4.1 GENERAL INFORMATION

4.4.1.1 Test Methodology

Conducted and radiated disturbance testing is performed according to the procedures in International Special Committee on Radio Interference (CISPR) Publication 22 (1997+A1:2000+A2:2002), European Standard EN 55022 (1998+A1:2000+A2:2003) and Australian Standard AS 3548 (which are based on CISPR 22).

The Japanese standard, "Voluntary Control Council for Interference (VCCI) by Data Processing Equipment and Electronic Office Machines, Technical Requirements" is technically equivalent to CISPR 22 (1997+A1:2000+A2:2002). For official compliance, a conformance report must be sent to and accepted by the VCCI.

In compliance with FCC Docket 92-152, "Harmonization of Rules for Digital Devices Incorporate International Standards", testing for FCC compliance may be done following the ANSI C63.4-2003 procedures and using the CISPR 22 Limits.

4.4.1.2 Measurement Error

The data and results referenced in this document are true and accurate. The reader is cautioned that there is some measurement variability due to the tolerances of the test equipment that can contribute to a nominal product measurement uncertainty. The measurement uncertainty was calculated for all measurements listed in this test report according to NIS 81/5.1994 "The treatment of uncertainty in EMC measurements" and is documented in the emitel AG quality system according to DIN EN ISO/IEC 17025. Furthermore, component differences and manufacturing process variability of production units similar to that tested may result in additional product uncertainty. If necessary, refer to the test lab for the actual measurement uncertainty for specific tests. The manufacturer has the sole responsibility of continued compliance of the device.

4.4.1.3 Justification

The Equipment under Test (EuT) is configured in a typical user arrangement in accordance with the manufacturer's instructions. A cable is connected to each available port and either terminated with a peripheral into it's characteristic impedance or left unterminated. When appropriate, the cables are manually manipulated with respect to each other to obtain maximum disturbances from the unit.

4.4.2 CONDUCTED DISTURBANCE

The final level, expressed in dB μ V, is arrived at by taking the reading directly from the EMI receiver. This level is compared directly to the CISPR limit, which is equivalent to the Australian AS 3548 limit.

To convert between dB μ V and μ V, the following conversions apply:

$$\text{dB}\mu\text{V} = 20(\log \mu\text{V})$$

$$\mu\text{V} = \text{Inverse log}(\text{dB}\mu\text{V}/20)$$

4.4.3 RADIATED DISTURBANCE

The final level, expressed in dB μ V/m, is arrived at by taking the reading from the EMI receiver (Level dB μ V) and adding the antenna correction factor and cable loss factor (Factor dB) to it. This is done automatically in a pc-programm, where the correction factor are stored. This result then has the CISPR limit subtracted from it to provide the Delta which gives the tabular data as shown in the data sheets in section 5.2. The CISPR 22 limit is equivalent to the Australian AS 3548 limit.

Example:	CISPR B	Delta							
Frequency (MHz)	Level (dB μ V)	+	Factor (dB)	=	Final (dB μ V/m)	-	Limit (dB μ V/m)	=	CISPR B (dB)
37.19	10.2	+	12.0	=	22.2	-	40.0	=	-17.8

4.4.4 DETAILS OF TEST PROCEDURES

4.4.4.1 General Standard Information

The test methods used comply with CISPR Publication 22 (1997+A1:2000+A2:2002), EN 55022 (1998+A1:2000+A2:2003) and AS 3548 (1992) - "Limits and Methods of Measurement of Radio Interference Characteristics of Information Technology Equipment" and with ANSI C63.4-2003 - "Methods of Measurement of Radio-Noise Emissions from Low-Voltage Electrical and Electronic Equipment in the Range of 9 kHz to 40 GHz."

4.4.4.2 Conducted disturbance

Conducted disturbance on the 50 Hz and/or 60 Hz power interface of the EUT are measured in the frequency range of 150 kHz to 30 MHz. The measurements are performed using a receiver, which has CISPR characteristic bandwidth and quasi peak detection, and a Line Impedance Stabilization Network (LISN), with 50 Ω /50 μ H (CISPR 16) characteristics. Table top equipment is placed on a non-conducting table 80 centimetres above the floor and is positioned 40 centimetres from the vertical ground plane (wall) of the screen room. If the minimum passing margin appears to be less than 10 dB with a peak mode measurement, the emissions are remeasured using a tuned receiver with quasi peak and average detection and recorded on the data sheets.

4.4.4.3 Radiated disturbance

Radiated disturbance from the EUT are measured in the frequency range of 30 to 1000 MHz using a tuned receiver and appropriate broadband linearly polarized antennas. Measurements between 30 MHz and 1000 MHz are made with 120 kHz/6 dB bandwidth and quasi peak detection and measurements above 1000 MHz are made with a 1 MHz/6 dB bandwidth and average / peak detection. Table top equipment is placed on a 1.0 X 1.5 meter non-conducting table 80 centimetres above the ground plane. Floor standing equipment is placed directly on the turntable/ground plane. Interface cables that are closer than 40 centimetres to the ground plane are bundled in the center in a serpentine fashion so they are at least 40 centimetres from the ground plane. Cables to simulators/testers (if used in this test) are routed through the center of the table and to a screen room located outside the test area. The antenna was positioned 3, 10 or 30 meters horizontally from the EUT. To locate maximum emissions from the test sample the antenna is varied in height from 1 to 4 meters, measurement scans are made with both horizontal and vertical antenna polarizations and the EUT are rotated 360 degrees.

5.4 Radiated disturbance in the frequency range 1GHz – 40GHz

For test instruments and accessories used see section 6 Part SER 3.

5.4.1 Description of the test location

Test location: Anechoic Chamber A4

Test distance: 3 metres

5.4.2 Photo documentation of the test set-up

5.4.3 Test specification:

Environmental conditions: Temperature: 23 ° C Humidity: 33 % Atmospheric pressure: 97 kPa

Frequency range: 1 GHz - 40.0 GHz

The test was carried out in the following operation mode(s):

- Testsoftware was active, FSK CH7 active
- Testsoftware was active, FSK CH13 active

5.4.4 Test result

The requirements are **FULFILLED**.

Remarks: Emissions above 18GHz were measured conducted at the antenna ports.

Date of test:	2009-03-26
Operator:	Jürgen Pessinger
Mode:	Testcycle is running, FSK CH7 active, Version with RS232 and relais
Standard:	FCC Part 15.209
Test:	Radiated Emission Test (Distance 3m)
Detector:	AV / Pk
Result:	Limit kept
Applied to:	Horizontal
Remark:	none

Minimum margin to limit: **-28,3 dB**

Frequency [MHz]	Reading [dBµV]		Correction [dB]	Value [dBµV/m]		Limit [dBµV/m]		Margin [dB]

5.5 Bandedges

For test instruments and accessories used see section 6 Part **SER 3**.

5.5.1 Description of the test location

Test location: Anechoic Chamber A4

Test distance: 3 metres

5.5.2 Photo documentation of the test set-up

5.5.3 Test specification:

Environmental conditions: Temperature: 23 ° C Humidity: 33 % Atmospheric pressure: 97 kPa

The test was carried out in the following operation mode(s):

- Testsoftware was active, FSK CH7 active
- Testsoftware was active, FSK CH13 active

5.5.4 Test result

The requirements are **FULFILLED**.

Remarks: Only Version with RS232, RJ45 and relais was tested. Vertical polarisation (worst case) used.
 Correction factor as offset added.

5.6 Field strength of emission within band

For test instruments and accessories used see section 6 Part **SER 3**.

5.6.1 Description of the test location

Test location: Anechoic Chamber A4

Test distance: 3 metres

5.6.2 Photo documentation of the test set-up

5.6.3 Test specification:

Environmental conditions: Temperature: 23 ° C Humidity: 33 % Atmospheric pressure: 97 kPa

The test was carried out in the following operation mode(s):

- Testsoftware was active, FSK CH7 active
- Testsoftware was active, FSK CH13 active

5.6.4 Test result

The requirements are **FULFILLED**.

Remarks: Only Version with RS232, RJ45 and relais was tested.
